

Textura-Construction Payment Management™ (CPM™)

Textura-CPM™ is a collaborative, web-based solution that streamlines invoice submission and payment for a construction project. CPM optimizes on the four major processes of payment applications:

- Invoicing
- Compliance management
- Lien waiver collection & tracking
- Disbursement

Our solution increases efficiency and reduces risk on new construction, relocation, expansion, and renovation projects, as well as maintenance. CPM has a solid track record of providing hard savings and improving productivity for each user.

All costs, including paid-to-date, current invoices and cost-to-complete, are easily accessible on a real-time basis. Invoices, lien waivers and compliance documents are electronically exchanged and automatically tracked.

Documents are electronically signed and routed for reviews and approvals. Textura-CPM supports project activities from before bid to after close out and automates communication between construction participants.

CPM integrates with all common accounting, project management and imaging systems to ensure a seamless flow of data with your other systems.

Textura® represents an opportunity for the construction industry to jump to the forefront of technology use.

Textura-CPM Features and Benefits:

Lower Risk

- Automation of:
 - Lien waiver collection
 - Compliance tracking
 - Email reminders
- Disbursement tied to compliance status
- Real-time information

Improve Control

- Better visibility of project billings and payments
- Single financial database for all project participants
- Standardized budgets and schedules of value

Reduce Costs

- Dramatically lower project administration costs
- Significant efficiencies over current manual and paper processes

Broad client adoption is solid evidence of the value Textura is bringing to the industry. Over 13,000 projects exceeding \$138 Billion in contract value are being actively managed by over 110,000 users on the system.

CPM: Delivering Value to All Construction Project Participants
